Name: Nikolaj Mølbak Troest Mail: ntro@itu.dk Phone: 51 21 20 22	Signature: Date: 02/03 2022	
Name: Katrine Meyer Mail.: Trinesmeyer@gmail.com Phone: 51 91 04 28	Signature: Date: 02/03 2022	
Name: Turið Højgaard Mail: tuho@itu.dk Phone: 81 95 00 16	Signature:  Date: 02/03 2022	

Agreement subject	**Agreements**
Group aim.	The aim of the group is to pass. The aim is not to get the highest grade, but to have an experience, where we are able to learn a lot, while also having fun. We do not want to get too stressed out by the workload nor be frustrated by the project. The group wants the project to be fun and exciting to not lose our motivation.
Group goal.	The group wants to achieve a better understanding of programming and become more experienced in tools like Git and IntelliJ.
Aim for each group member.	Katrine: To be able to divide a large unmanageable project into parts, so that it becomes manageable to program. To be able to work independently with coding, and to get a lot of coding experience, which should benefit me in the next semesters. Turið: To work independently with programming, and to understand programming at a tangible level. Hannah: To be more confident in programming, and to understand the underlying things, which I do not understand right now. Nikolaj: To be able to program independently and to be more experienced in both GitHub and IntelliJ, as well as to be able to navigate through the terminal.
Group strategy. (How does the group reach the goals of each group member?)	*How will we make sure that everyone contributes?* - In the group we trust each other as we've worked together previously. - If we experience that a group member is falling behind, it will be brought up. - The group will distribute the tasks, so the difficult tasks will be equally distributed. - The group finds it important that everyone understands each other's code. Therefore we will use comments in the code (even in places where it might seem trivial).
Expected weekly working hours.	20 hours.
When and where will the group meet? (Meeting schedule)	*Fixed meetings:* The group will have fixed meetings on Wednesdays at 10. Here we will discuss, if it is necessary to meet up Friday.

	Generally, the group prefers to meet physically and at 10. Apart from that there will be virtual meetings during the week. Every second Friday, Katrine has a work meeting at ITU. Therefore, the group will meet at ITU these fridays. The other days, we will discuss beforehand where to meet.
How will tasks and the overall project be handled? (How to gather the work of each group member to reach the mutual goal?)	The group aims to work agile in this task. This means we have had an iterative approach and changed the task along the way. The group will make use of Scrum, which is an empirical way of managing, planning, and organizing work. For this we will use the tool Trello, which will help us keep track of the tasks. Trello makes it possible to follow each other's work and process. The group will have a Scrum meeting every meeting, led by our Scrum master Katrine. At these meetings, we will gain an overview of each other's work, and talk about any concerns or situations that have arisen. The group will make use of GitHub, where each group member will code in their own branch. When the code is working the group member will merge the branch to the main branch.
What concerns and challenges may appear in the teamwork?	- Frustrations when implementing the code - Group members not showing up at meetings - Group members being late - Group members saying they will do a task, and not doing it - Group members not telling, when something is not working - Group members not telling that they can't manage to do their task on time - Bad code
How will problems and conflicts be resolved?	Be patient. Address the conflicts by talking about them. Everyone contributes. *Decisions:* If a group member has any suggestions to optimize the code, it will be presented by that person and afterwards it is to be decided by the group whether the suggestion should be implemented or not. If any disagreements should appear they will be taken into consideration and it shall be decided by show of hands with arguments thereon, to reach the best possible solution. Depending on the size of the problem, the group will take a break. The length of the break must be agreed

	on by the group members. The members will return and try again to reach an agreement. *Conflicts concerning the project:* When disagreements/conflicts occur, each group member must present their case. The best case will be picked by votes. *Interpersonal conflicts:* If a group member has an issue, it's very important to make notice of this early on. If this occurs, the other group members must openly and actively listen to the issue and try to arrive at a solution.
What barriers can prevent reaching the final goal?	Katrine works a lot. Sometimes she has to work extra with short warning. Katrine: Monday, Tuesday and Thursday (Sunday). Nikolaj: Thursdays and every third Friday.
How can the group avoid barriers that may slow down the process?	Arrange/rearrange plans accordingly. Have an understanding for each other's obstacles.
